

THE PAPER WHITEBOARD

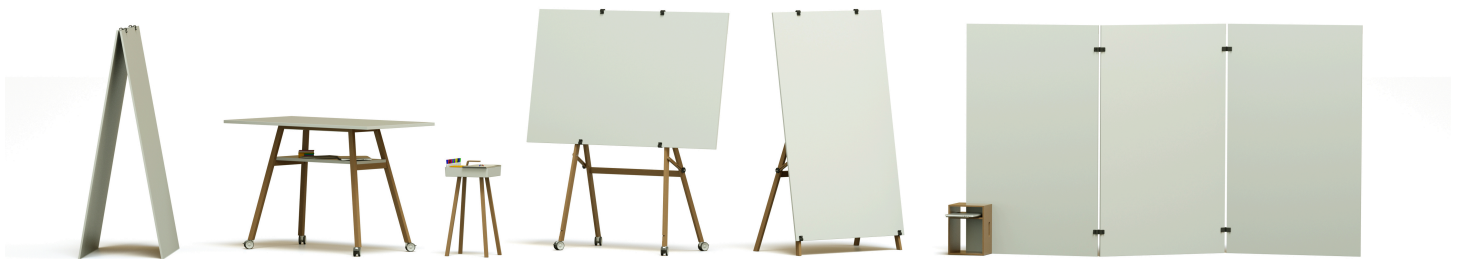

#Ultralight #Fast #Agile #Flexible

A large free standing white sheet of paper was the initial design idea. The whiteboards are effectively made of paper and thanks to the honeycomb structure in the core astonishingly stable with minimal weight. The coating has a matt finish, which preserves the natural feel of the paper. Nothing should distract the eye and attention. No joints. No unnecessary edges. No frame. No reflective surfaces. No shadows. Nothing. The result is a truly purist design. We have also followed this credo for all other products. Natural materials, timeless proportions and clear lines.

The 2m² whiteboards withstand a surface pressure of 20 tons and are light as a feather with only 4 kilos. They can be connected with magnetic clips and are therefore ideal for agile working environments where fast flexibility is required. All Studiotools products can be assembled, disassembled and reassembled by one person in the shortest possible time. In no time at all, the working environment can be adapted to the situational requirements and a creative and agile working environment can be created in any room.
