

SOUND CURTAIN OFFICE

ABSORBER CS

ABSORBER LIGHT

VARIABLE ACOUSTIC SOLUTIONS FOR INTERIOR – OFFICE – PUBLIC SPACE

The big portfolio of acoustic solutions from the German manufacturer Gerriets is still growing, due to acoustic control becoming an increasingly important issue. Whether in the private, public or professional sector, the modern work environment can require the separation of different work spaces or the creation of enclosed meeting areas. Our Sound Curtain OFFICE combines the effectiveness, flexibility, aesthetics and design to meet the challenges and demands of modern work spaces.

For use in both small and large windows, we offer ABSORBER LIGHT – a uniquely developed translucent and highly absorbent semi-sheer fabric which utilizes thousands of micro perforations. ABSORBER LIGHT has an exceptional absorption level that reduces reverberation times, ensuring optimal speech intelligibility and, at the same time, adds a degree of warmth to a room.

When both excellent sound absorption and room darkening are required, ABSORBER CS is the perfect choice.

INSPIRED BY CONCERT VENUES

High end theatre drapery opens up totally new possibilities for projects in architecture and interior design. In the last years the long-established German company Gerriets transferred the knowledge and technical abilities from the world of theatre and opera houses to area of interior design and offices. Thus an extensive collection of acoustic textiles has been established. Perfect sound absorption, excellent workmanship, a broad collection of fabrics, low flammability, seamless up to 4.50 m width, attractive pricing. All these aspects can be found in the Gerriets Acoustics collection, because only the best quality is acceptable in a concert house or on stage of the big operas. It was here that the first ever sound insulation curtain has been developed to create variable meeting spaces and flexible rooms.

Highly flexible rooms can be created in combination with the extremely quiet and smoothly operating track systems, also originally created for the challenging theatre world. The all-rounder acoustic fabric is the ABSORBER CS, with its high weight and optimal absorption values often used in curtain systems or roller banners. This fabric also can be installed as a stretched ceiling or ceiling panel. If a modern room flooded with light is aspired, the ABSORBER LIGHT can be used. It combines high acoustical absorption with a remarkable light transmittance and was the first ever fabric of this kind on the market.

Since more than 70 years the multi-layer curtains have been used to dampen the noise on stage of opera houses and theatres during change-over. These curtains were transferred to the interior architecture and office world more than 10 years ago and are now known as the Gerriets sound curtain OFFICE. With a sound dampening of up to 26 dB this product contributes perfectly to the idea of flexible room division and variable meeting spaces, in the open space office as well as in auditoriums, museums or libraries. It thereby also functions as a design element.

DESIGN & INNOVATION

The innovative products of GERRIETS INTERIOR ACOUSTIC SOLUTIONS should adapt to the individual concept and support the design idea of the architect. Therefore a broad collection of fabrics supplies the optimal foundation for a successful building project. Decade-long experience in textile crafts as well as the knowledge of hundreds of complex installations are combined to find the perfect solution for every project.

The individuality of the projects can also be found in the creative possibilities of the products. Individual prints and also the integration of external material into the Gerriets systems are only two of the many possibilities to ensure endless creativity. These diverse fields of application also convinced the jury of the innovation award ARCHITECTURE + OFFICE 2016, which awarded the products with a special mention.
