

ISIR.digital

„The digital ISIR integrates partners into the ecosystem of our digital product development and is an important milestone for the future“

We want to integrate our suppliers directly into our product development process.

A Vitra team with members from the design, sourcing and quality departments has been established. In an agile approach, the ISIR process is iteratively transformed and digitalized to a point where an interactive and intuitive coupling of the partners is possible.

A cornerstone has been laid for the common path of digital transformation with you as a Vitra supplier. We look forward to constructive feedback and suggestions for a common digital future.

Quality Integrated work and data flow

Release 1.0:

- Measurement points that are created directly from the CAD drawing
- A clear task definition in the form of highlighted tasks
- Semi-automatic workflows minimize waiting times in the processing the ISIR
- On-demand PDF report generation

Upcoming Releases:

- Archive function with access to completed ISIR
- Comparison between ISIR revisions

Experience Usability in Focus

Release 1.0:

- Part-oriented ISIR search
- Data acquisition via an intuitive web interface
- Support for mobile devices
- Office 365 like user interface
- Help and support according to ITEL standards

Upcoming Releases:

- Barcode labels for parts delivery to Vitra make logistics easier
- On-The-Fly data validation with notification of deviations from the test specification
- Help and support are integrated into the application

Security „Need to Know“ Principle

Release 1.0:

- Consistent end-to-end process
- The results are saved directly in the Vitra PLM system
- Secure partner access using modern access technology

Upcoming Releases:

- REST-API offers partner-side the possibility of direct coupling of QM applications

As a user, I would like to be able to search for parts. I know them.

As a user, I want to see exactly the tasks that I am supposed to do..

As a user, I would like to be able to research. The information on an ISIR should be displayed in the same panel without flickering.
