

Repad

Ronan & Erwan Bouroullec, 2023

vitra.

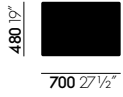

Vitra developed Repad with the designers Ronan and Erwan Bouroullec. It is not only suitable as a desk pad for assorted paper sizes, but also structures and defines the personal workspace as an underlay for a laptop or keyboard.

Repad is manufactured from bonded leather. For this recycled material, remnants from Vitra's furniture production are shredded and enriched with vegetable tanning agents, natural rubber, fats and water and then dried.

Repad has the pleasant feel of real leather and comes in five colours: a natural hue and four variants with a colour-coated finish. The palette is coordinated with the materials of the Joyn 2 office table system, but is also suited for use with any other table surface.

- **Material:** 100% bonded leather, made up of remnants from Vitra furniture production. Variant in natural hue with protective sealant; colour variants with coated finish.
