

Vitra setzt am häufigsten Aluminium und Stahl ein. Weil die Herstellung von Aluminiumrecykat 94 % weniger Energie als die Gewinnung von Primäraluminium benötigt, verwendet Vitra wo möglich Aluminium mit einem Recykat-Anteil von 95 %.

Metalloberflächen sind je nach Produkt pulverbeschichtet, verchromt, poliert, verzinkt oder mit Flüssiglack behandelt erhältlich. Die glatte oder leicht strukturierte Pulverbeschichtung dient der Farbgebung und dem Schutz.
